

KACHALLA AHMAD GALADIMA

Computer Engineering Student, Control and Automation / Embedded Systems / IoT

Kaduna, Nigeria | +234 810 445 1902 | ahmadkachalla3@gmail.com

PROFILE

Computer Engineering student at Ahmadu Bello University, Zaria, with a focus on control and automation systems, embedded systems, IoT, and applied artificial intelligence. Experienced in building end to end hardware and software systems, from sensor level firmware to cloud dashboards and mobile applications.

EDUCATION

B.Eng. Computer Engineering

Ahmadu Bello University, Zaria, October 2019 to Present

Secondary Education

An-Nur Islamic College, West African Senior School Certificate Examination (WASSCE), 2019

TECHNICAL SKILLS

Industrial Automation and Control: PLC Programming (Ladder Logic), Factory I/O Simulation

Embedded Systems and IoT: Arduino / ESP32

Software Development: Python / Django, HTML / CSS, Flutter

Engineering Analysis and Simulation: MATLAB / Simulink, Proteus Simulation

Cloud, Database and Version Control: Firebase, Git and GitHub

Computer Systems and IT Support: Computer Maintenance and Troubleshooting, Operating Systems (Windows), Software and Hardware Installation

EXPERIENCE

Mainstream Energy Solutions Limited

Industrial Trainee (SIWES), 6 months

Ameerco Global Limited

Computer Training, 4 months

- Completed practical computer training and obtained a Certificate in Computer Appreciation.

PROJECTS

IoT Based Smart Water Tank Monitoring and Control System

ESP32, Ultrasonic Sensor, Relay, Supabase, React PWA, Android

Automated water level monitoring and pump control system with offline safe local control on the ESP32 and a real time remote dashboard for monitoring, alerts, and configuration.

Smart Poultry House Environmental Monitoring and Automated Temperature Control System

ESP32, DHT22, Relay Control and Temperature Sensors

An IoT based poultry house system that continuously monitors temperature and humidity to maintain a healthy environment for poultry.

Factory I/O PLC Automation Exercises

PLC Ladder Logic, Factory I/O, Sensors and Actuators

Series of ladder logic control programs covering conveyor sequencing, sorting stations, and automated water tank system developed and tested in Factory I/O.

COMMUNICATION

- Presented technical project work, including the IoT Based Smart Water Tank Monitoring and Control System, to academic supervisors and peers.
- Comfortable documenting and explaining engineering and software projects clearly to both technical and non technical audiences.
